

**Q. How is Trubord made differently from other standard sheathing products?**

A. Trubord uses new resin formulation plus a new Quality Protocol has been implemented to ensure our highest standards are met.

**Q. Why would I try Trubord?**

A. Trubord's resin formulation and quality protocol comes directly from our very successful t&g sub-floor brand – TruFlor. Product manufactured using this standard have been proven in the market place and have been overwhelmingly endorsed by builders. This new protocol has been implemented at all our mills and Trubord is now available to all major markets. These standards result in swell properties as good as or better compared to other leading standard OSB brands. There are no core voids and the panel will not delaminate.

**Q Does Trubord have a warranty?**

A. Yes, Trubord comes with a 25 year limited warranty.

**Q. Are you doing anything to distinguish Trubord panels and units from others?**

A. Trubord has a new logo stencil of every unit and our unique khaki color edge seal used on our TruFlor brand.

**Q. How do I know the quality is there and do they meet building codes?**

A. Trubord panels carry the APA (The Engineered Wood Assoc) grade stamps to ensure quality is built into each panel. The APA grade stamp assures acceptance by building codes.

**Q. Is Trubord approved for use on roofs or walls?**

A. Trubord is code approved for both roof and wall applications.

**Q. Are there special installation requirements and will my trades require training?**

A. Follow the APA installation instructions E-30U, your building code and/or a design professional's instructions. Trades familiar with OSB, will not require any additional training.

**Q. What thickness is available in Trubord?**

A. Trubord is available in every standard thickness from ¼"\* to 1 1/8". Tongue and Groove panels carry the TruFlor brand name. (\* ¼" does not have a grade stamp)

**Q. Are Trubord panels hard to screw or nail like some other panels?**

A. Trubord panels are easy to handle, nail or screw and are also easy on fastener equipment, and saw blades.

**Q. Where does your wood come from and how can it meet my green initiatives?**

A. Trubord wood fiber is from responsibly managed forests and Trubord is also available with FSC or SFI CoC. Trubord contains no added urea formaldehyde.
